Buildroot Zero-W wireless

Asked 2 years, 7 months ago Active 1 year, 11 months ago Viewed 4k times

▲ Has anyone got WiFi working in buildroot for the Raspberry Pi Zero W? I can't find any online notes or walkthroughs on it.

4

The *raspberrypi0_defconfig* works fairly well, but doesn't include wireless.

I'm using the latest iteration of buildroot, 2017-08. I've added the rpi-wifi-firmware. Which packages are needed as a bare minimum to connect to a WiFi network?

▲ I also tried to find the "bare minimum wireless" for RPi Zero W using buildroot so this Q&A came quite high on the search results. Eventhough the original answer was somewhat helpful, it's definitely not the best one so I though it would be worth sharing my own findings:
